

Beer Contains Female Hormones!

This is serious stuff...

Last month scientists at the National University of Lesotho released the results of a recent analysis that revealed the presence of female hormones in beer.

Men should take a concerned look at their beer consumption.

The theory is that beer contains female hormones (hops contain phytoestrogens) and that by drinking enough beer, men turn into women, yes WOMEN.

To test the theory, 100 men drank 8 pints of beer each within a 1 hour period.

It was then observed that all the subjects showed the following symptoms:

- 1) Argued over nothing.
- 2) Refused to apologise when obviously wrong.
- 3) Gained weight.
- 4) Talked excessively without making sense.
- 5) Became overly emotional.
- 6) Couldn't drive.
- 7) Failed to think rationally
- 8) Had to sit down while urinating.

No further testing was considered necessary.

Theory Proven!
